

Electric chain hoist

Product code: TY1 | **Category:** Hoist, winch and ratchet

Product images

Short description

Our electric chain hoist is a load lifting device used in many application contexts such as workshops, garages or large manufacturing companies. It is equipped with a practical remote control to move goods remotely.

Various models are available, differing in capacity and motor power:

- Load capacity: 0.5 ton with motor power: 0.8 Kw
- Load capacity: 1 ton with motor power: 1.5 kW
- Load capacity: 2 tons with motor power: 3 kW

We deliver all over Europe!

For further information please call: +39 0735 702346

Technical specifications

Weight	47 kg
Portata	0,5 ton, 1 ton, 2 ton

Product variations

Variation name	Variation values	Variation SKU
Electric chain hoist - 0,5 ton	Load capacity: 0,5 ton	0000000331
Electric chain hoist - 1 ton	Load capacity: 1 ton	0000000332
Electric chain hoist - 2 ton	Load capacity: 2 ton	0000000333

Product description

Electric chain hoist

Our electric chain hoist is a tool for lifting goods used in various application contexts such as garages, workshops, warehouses, works at height and similar. Its structure is composed of an aluminium casing, making it a durable yet lightweight and easy-to-handle accessory. It does not require complex operations to be installed, and as far as its maintenance is concerned, you can do it autonomously.

The electric chain hoist is equipped with a fixed hook that allows it to be used both in outdoors and indoors activities. It is powered by a copper motor, a material that has important properties such as electrical conductivity. On this motor then there are gears on which a special heat treatment has been applied and which are characterised by high strength and low noise. The operator can lift and release the goods by means of a remote control, which minimises effort and speeds up the production process. On this remote control, you can drive a waterproof, light and strong push-button switch. With the magnetic braking device, instant braking can be achieved when the power supply is interrupted.

The steel chain also guarantees maximum stability and precision when handling loads. The load hook connected to this chain has a locking mechanism that keeps the goods firmly in place, thus preventing them from falling to the ground and being damaged.

This device is CE-certified, which guarantees its excellent quality and efficiency.

We offer different versions varying in load capacity and, therefore, in motor power:

- Load capacity: 0.5 ton with motor power: 0.8 Kw
- Load capacity: 1 ton with motor power: 1.5 kW
- Load capacity: 2 tons with motor power: 3 kW
